

# What are Site Templates?

Site templates are pre-configured site shells from which new sites may be created.

## Site Template Features

- Streamline the site creation process,
- Include pre-selected tools and content,
- Standardize the presentation of content and activities for site participants and,
- Support both course and collaboration site types.

## Create site from template.

When selecting the option to create your site from a template using *Site Builder*, you will see the available templates and a brief description of each one.

For more information on creating sites using a template, refer to [How do I create a site using a template?](#) for steps.

-  UVA departments and schools may consult with the [UVACollab team](#) to request a site template with specific features, naming conventions, and content to standardize sites for their courses.
